

CSE 110 Video Script

Tasks:

1. Opening statement [Lailah]
2. Enter intolerances and Maxtime [ayushi]
3. Find the “Crisper Whisper” (hint it is a smoothie) [nathan]
 - a. Favorite and delete, change serving size
4. Check favorite folder[Zhenyi]
5. Home page [sik]
 - a. Create recipe
 - b. Upload image for recipe
 - c. edit
6. Home page [martin]
 - a. Create using web scraper
 - b. Check out new recipe
7. Done: bomb defused [Anthony]

After tasks:

- Github problems:
 - CI/CD Pipeline war, Design challenges in the armory, communications were down
- Advice:
 - Set up project board, start early, communicate with team mates, keep active and aware

Team Name and Number

Brief mention on video or with a picture of each member and their role(s)

A quick tour of your Recipe Manager product (make that part sizzle to show off any features or things you are proud of)

A brief retrospective of what challenges you faced, what things you felt you overcame and anything you feel you would do differently now that you are done

Conclude your video with a brief point of advice for the next students (victims) of 110 projects so they crush the project

Opening (Lailah):

- Welcome Student Agent to Her Majesty's Team 003. Now recruit, it's time to get you acquainted with our members. (Introduce members)

Enter intolerances and Maxtime (Ayushi):

- Your first task is to enter an intolerance. Agents are not allowed to eat anything with shellfish in it since it's against our policy.
- I also don't like to see recipes that would take me longer than 60 minutes to cook

Search (Nathan):

- Agent well done on your last task. Your next task is to find the devious recipe called The Crisper Whisperer.
- The most up to date information was that it was hiding among smoothies.
- I want you to find the Crisper Whisperer and make sure you don't lose it by Favoriting it.
- Then I want you to try to reduce the serving size of it to 1 and observe how the ingredients and nutrients change. This way, we can hopefully reduce the damage.

Favorite folder (Zhenyi):

- Nice work, agent! Time to practice~ Now you can browse the homepage to add some favourite recipes by clicking the heart. If you don't like a recipe at all when browsing or don't want to see a recipe again, we can delete the recipe by scrolling down to the bottom of the recipe card and clicking delete.
- Next, we are going to look at our prison: favorite recipe folder. Here, you can easily find what you browsed and liked before. It would save lots of time when you are starving.
- Of course you can unfavorite a recipe by clicking on the heart on top of the recipe.

Home page (Sik):

- Agent, now is your time to contribute to the agency. Go to home page and click the add button, you will see 2 other buttons, click the one that with a web page
- Upload an image and fill up all other informations to create a recipe
- Name: Justice
- Time: 7 minutes
- Serve: 7 people
- Description: best served cold
- Ingredients: guns and bullets
- Steps: get license to kill
- Nutrition Information: blood
- After you are done, click the 'create' button to create a recipe
- Wait, you just made a typo in the recipe, now click on the 'edit recipe' on the bottom right and correct the typo. Then click 'update' to finish the task.

Web Scraper (Martin):

- Good job! Not a fan of typing? We have just a solution for you. Now let's introduce you to the web scraper. First go to your search engine and search for a recipe you like. Found one? Copy its link!
- Now go back to the home page and click on the add button again. This time we'll use the leftmost option. Click on it, paste the link you copied inside the prompt, and confirm. Now you have a recipe all to yourself.
- Isn't that just convenient and effortless? And your input to the agency is very much appreciated.

Ending (Anthony): Congratulations Agent you have successfully passed your orientation, and gained access to our interior records, we will now tell you a bit about our organization.

GitHub Problems (Jared):

- This agency hasn't always been sunshine and rainbows
- In its early stages, the frontend and backend groups had difficulty working together
- For 3 days we battled design struggles as well as with CI/CD where the team had trouble fighting the enemy JS Docs and Jest
- Furthermore during these fights communications went down causing the agency to struggle with teamwork
- However, as time went on and the agents educated themselves, the communications were fixed and the CI/CD battle won
- The overcoming of these struggles is the foundation for the strong teamwork the agency has today

Advice (Parsia):

- Make sure you start working on your missions early! [You never know how long reconnaissance will take.]
- With all the tasks in your dossier for the mission, make sure you update the project board often. [Wouldn't want to forget to fix the night vision goggles before taking it out to the field]
- Communicate your movements to your fellow agents; they should know what you're trying to accomplish
- It takes only a second of being distracted for the whole mission to fall apart! Be mindful and stay on task!

Congratulations!

You have graduated from being a Student Agent to a Special Agent. Get out into the field and start cooking.
